MEGARUN tyre has developed the latest OTR and TBR tyre technology in manufacturing, distribution, tyre life cycle management, providing the full range of tyres in most scenarios applications. Megarun Tyre is dedicated to develop a sustainable distribution network globally, with premium quality, a fair and stable pricing strategy, efficient delivery approach and true exclusivity protection of market with latest IoTs tracking technology.

As a MEGARUN's strategic partner, Xingyuan group, founded in 1994, is one of the largest leading tyre manufacturing base in China. Xingyuan group, a diversified business enterprise, is located in Guangrao county of the Shandong province, having more than 6,800 employee, among which over 680 engineering technicians.

MEGARUN R&D team has developed so far 18 series, 160 sizes and 200 tread patterns within our range of all steel radial truck tyre, radial and bias off the road tyres. We have been granted 67 patterns in many districts of the world, including Europe Union, North America and South Africa.

We work to our mission statement which is "Quality is our life, and making our tyre a global world class brand". We have world class production and testing equipment to enable us to produce high quality product. Our tyres have passed certification by many well-known Technical Organisations and Quality Standards including DOT, ECE, REACH, CCC, GCC, SNI, BIS, 9001, ISO14001 etc. Our products are sold to over 100 countries and regions, such as the Middle East, Southeast Asia, Africa, Europe, Latin America and The United States of America. With our high quality product, competitive pricing, on-time delivery and superb after sales service we have a reputation of being a reliable, trustworthy enterprise supplying an excellent product, to both the domestic and export markets. We would like to invite you to join us with a view of developing a long term business relationship.

TKPH/TMPH DEFINITIONS

The Ton kilometre per hour fraction is of great assistance in determining the suitability of a tyre for an operation.

The following factor must be borne in mind with regards the TKPH factor when selecting a tyre Maximum operating TKPH should not exceed the tyre TKPH rating. The average operating TKPH to be calculated after several checks, and should not exceed the tyre TKPH rating.

The TKPH rating data are applicable in the following situations

To all standard, heat or cut-resistant tyres.

Ambient temperature less than 38 C

Maximum trip distance less than 5 km.

Maximum speed of 50 km/h.

TKPH ADJUSTMENTS

The TKPH factor is influenced by heat. When the heat in the tyre increases due to abnormal conditions such as high ambient temperature, speed and overloading the TKPH should be reduced. Similarly adjustments to the TKPH can be made if the ambient temperature or the speeds are low.

TKPH CONVERSION FACTORS

For temperatures in excess of 38C-The TKPH should be reduced by approximately 2% for each degree rise above 38 C

For temperatures lower than 38C-The TKPH should be increase by approximately 1% for each degree below 38 C

Calculating TKPH(to determine actual work rate of an operation)

1.Obtain average of empty and loaded mass per tyre tons for each axle. (If no scales available,use specification sheet masses as best possible estimate).

Mean Tyre Load in Ton=(Empty Mass in kg+Loaded Mass in kg)/(2*1000)

2.Obtain overall length of round trip per haul from an engineer.

3.Obtain number of loads hauled per shift from contractor's load count.

4.Obtain total shift hours from contractor.

5. Calculate overall average speed based on Items 2,3 and 4.

Work Day Average Speed=(Overall round trip length*Number Loads per Shift Shift Hours.

6. Calculate TKPH based on the HEAVIEST loaded tyre in Item 1 and average speed from Item 5.

TKPH=Mean Tyre Load*Work Day Average Speed.

7.If the calculate TKPH requirement is higher than the TKPH rating of the tyre being used, reduce speed and/or load or use a tyre with higher TKPH rating.

MPH AND TKPH EXCHANGE

TMPH=TKPH*1.459

TKPH=TMPH*1.459
